

State of the art electronics including the Kansa Route Control System for your zoning and routing needs.

760 Inserter

From the small daily to the large metropolitan newspaper, from a 4-page to a 128-page jacket, from single sheet inserts to large advertising supplements, the 760 handles them all!

The 760 is of modular design which makes it a **space saver**. It is fast and is easily loaded which makes it a **labor saver**.....and it will run up to 11 inserts in a single pass, which makes it a **money maker**.

The 760 will run your half-fold and quarter-folds as a jacket with only a few minutes change over. Flat tabs can also be used as your main section, and opened with vacuum or spear.

Features Include:

- Waist-high hoppers for easy loading
- Double-out capability available
- Main control panel with constant digital readout for speed
- Positive feeding by vacuum suckers & nip rollers
- Fingertip adjustable side guides
- On-the-run feeder timing adjustments for each station
- Individual vacuum system per station
- Positive, accurate batch and total counters
- Adjustable delivery direction
- Magnetic interlock safety switches

Route Control System:

- Provides online remote connection
- Includes embedded operator's and parts manual
- On screen diagnostics indicate system's status
- Provides statistical information of system's performance
- Automated enabling of feeding stations based on package configuration
